# DON'T OVERPAY FOR COPIES

**Typical printers cost a fortune to operate. Don't be a victim.**

Home use style printers (in use at many businesses) operate on a “cost-shifting” basis. The low purchase costs are made up for in the super high cost of inks and toners. (This is similar to how cell phones are sold).

If you use only one or two reams of paper per year – these home use (“SOHO” Class) machines are ok. For higher volumes they will cost a minor fortune to keep supplies.

Typical HP & Lexmark machines  
(of this type) **cost 5-to-15 cents**  
per black/white **page**; And **up to**  
**\$1.00 dollar/page for color**

**-VS-**

A Commercial Grade Machine  
Will have a supply cost **UNDER**  
**1 cents/page** for B/W; and less  
than 15 cents/page for Color.

Let us show you how to save a  
fortune in copy/print costs.....

**AND**

Get a **POWERHOUSE**  
Machine with the savings.
